GitHub: sagnikmaity33 | LeetCode: SagnikMaity33

Summary

Backend Engineer (Java, Spring Boot, Distributed Systems) with hands-on Agentic AI/LLM engineering experience (Python, LangChain, RAG); ramps up on new stacks fast and owns problems end-to-end with minimal guidance.

Technical Skills

Core: Backend (Java): Java, Spring Boot, Spring MVC, Spring Security, Spring Data JPA, REST APIs, GraphQL, WebSocket
Distributed Systems: Microservices, System Design, Event-Driven Architecture, Kafka, RabbitMQ, Redis, Saga Pattern, CQRS, Load Balancing, Idempotency, Distributed Transactions
AI / Agentic AI: Python, LLMs, LangChain, LangGraph, RAG, Prompt Engineering, Vector Databases
Databases: PostgreSQL, MySQL, MongoDB, Firebase, Prisma, Flyway
DevOps, Cloud & Testing: Docker, Kubernetes, Git, CI/CD, AWS, Linux, JUnit5, Mockito, Testcontainers, Grafana, Prometheus
Also comfortable with: JavaScript, TypeScript, Node.js, Express.js (prior internships); OOP, SOLID, DSA, Agile/SDLC

Experience

Tellis Technologies Pvt. Ltd. — Jun 2025 – Aug 2025

Backend Engineering Intern (Certificate)

- Owned system design and architecture for a scalable full-stack platform under Agile delivery, translating requirements into REST API contracts and service boundaries.
- Designed and implemented REST APIs, real-time communication (WebRTC, Socket.io), and caching (Redis) using Node.js, Prisma, and NeonDB, improving performance and reliability of core flows.
- Set up automated testing (Selenium, Jest) and Dockerized, Git-managed workflows; added AI-based insights to support scalable deployment decisions.

Valantech — Sep 2025 – Dec 2025

Full Stack Web & App Developer

- Built a Smart Society Management System end-to-end: a React Native mobile app with a companion web admin dashboard, covering service requests, document management, and resident notifications.
- Implemented secure authentication and full-stack functionality using React, Node.js, and MongoDB; integrated Spring Boot components, Docker, CI/CD, cloud storage, and cron-based jobs; added LLM-based workflows for automation.

Projects

PayFlow – Distributed Digital Wallet Platform — 2025 – Present

- Architected a 6-service event-driven microservices system (Java, Spring Boot, Kafka, PostgreSQL, Redis; API Gateway, Orchestrator, Wallet, Ledger, Fraud, Notification) using DDD, Saga orchestration, CQRS, and database-per-service isolation for distributed transaction management with compensating rollbacks.
- Ensured exactly-once, idempotent transactions under concurrency via optimistic/pessimistic locking, a transactional outbox pattern, and DLQ-backed Kafka retries.
- Secured stateless APIs with JWT, RBAC, Spring Security, and Spring Cloud Gateway; validated with JUnit5, Mockito, and Testcontainers; deployed via Docker Compose and Kubernetes.

LIVYFY – AI-Powered Housing Marketplace — May 2025

- Designed a multi-agent LLM system (Spring Boot, FastAPI, LangChain, LangGraph, ChromaDB) with Budget, Commute, and Final-Decision agents voting on a sequential agent graph to generate ranked property recommendations, backed by a RAG-based hybrid search engine (SentenceTransformers, cosine-similarity ranking) with fault-tolerant JSON parsing over the OpenRouter LLM API.
- Engineered a Spring Boot + PostgreSQL backend consuming AI recommendations over REST; containerized the full stack (Nginx, FastAPI, Spring Boot, PostgreSQL) via Docker Compose and deployed on Kubernetes with Prometheus/Grafana monitoring.

Education

Haldia Institute of Technology — Sep 2023 – Sep 2027

B.Tech in Computer Science and Engineering – 8.41 YGPA — *Haldia, India*

Extracurricular & Achievements

IEEE HIT-SB – Technical Non-Teaching Member & Web Developer (Jan 2024 – Jun 2027): grew online reach 40%, organized 5+ workshops, published 10+ tech articles, partnered with 8+ organizations.
600+ problems solved on LeetCode; Finalist, DoubleSlash 2.0 Hackathon (JU); participated in multiple national hackathons.
